Creating Slides

3 years ago · Updated · [Print/PDF](#) Translate this article: 

Slides are made up of 1-9 components (data visualizations) that show data from whichever data source(s) you plug into them. They are dynamic and animated, and each one shows a different aspect of the data. We'll look now at how to add them to your deck and the various settings available.

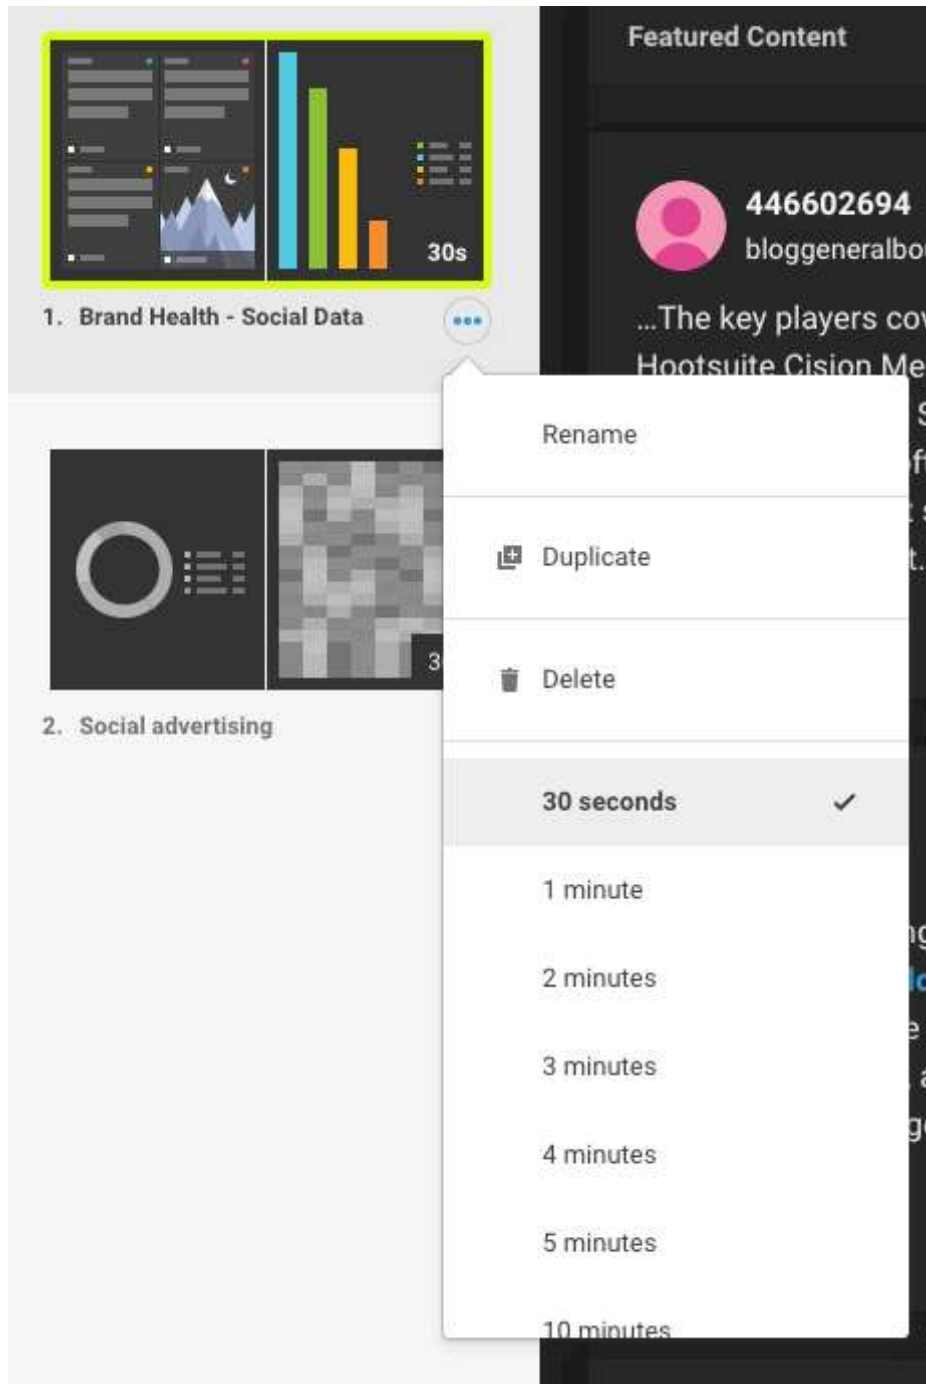

Adding Slides to Your Deck

When you open a new deck it will bring you to the **Deck Editor** interface. To name your slide, triple click on "Untitled Slide" at the top of the slide. From here you are able to add components and more slides to build out your deck.

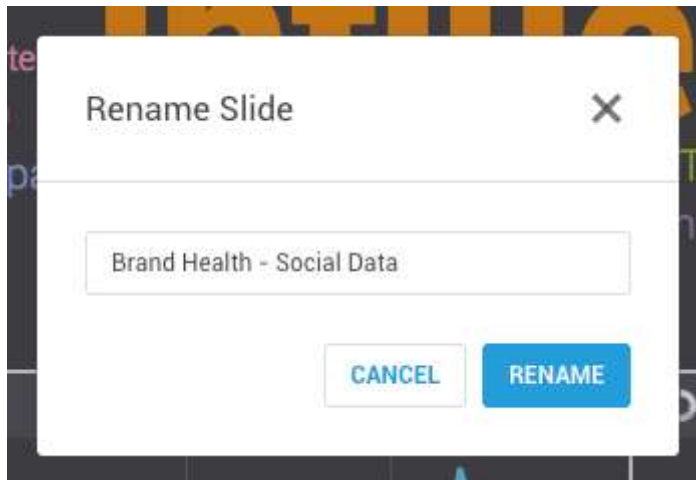

To add a new slide, click the + button in the top left of the deck editor. As you add slides, you will be able to see them down the side on the left. You can change the order here by dragging and dropping.

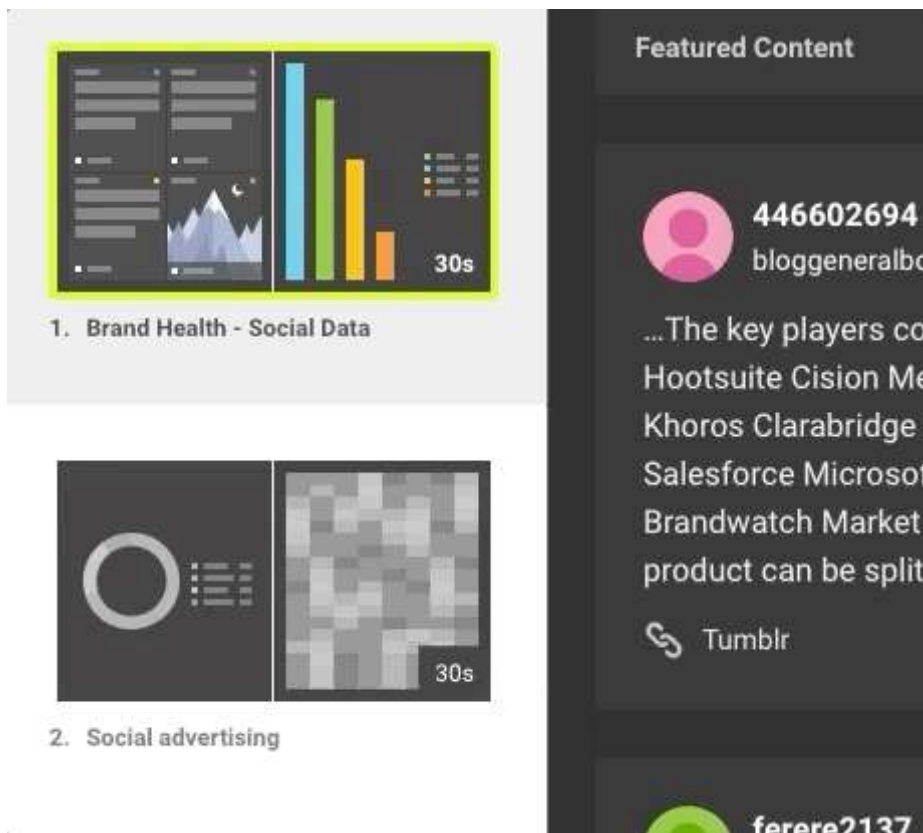

When you have added some components to a slide you will see the control options available.

1. Rename

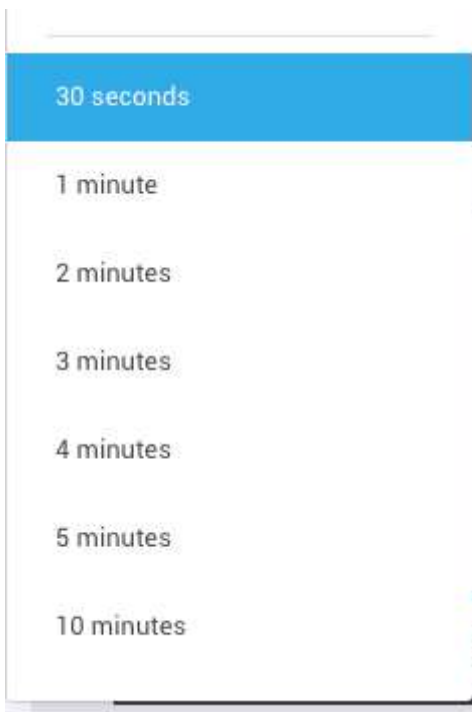

2. Duplicate

3. Delete

4. Set Intervals

This allows you to determine how long each slide will display for when it is live on a screen. For example, if you choose 30 seconds, it will switch to the next slide after 30 seconds. Each slide can be set to different time intervals.
