

## Managing Spam in Engage

Brands are experiencing more and more spam and inappropriate content on their messages, and sorting through spam is a time-consuming effort that takes your attention away from the messages that matter. With Engage, set up automation rules to easily handle spam content and use filters to control messages that were wrongfully categorized as spam. In this article, learn what automation options you have to manage spam and how to use filters in your feeds and Detail view to recategorize spam messages if needed.

### Creating automation rules to manage spam

With automation rules, you can set up your feeds to automatically mark incoming messages as spam in Engage, mark messages as hidden in Engage to hide them on the native network, and mark messages as read in Engage based on different triggers and conditions such as keywords.

When [creating an automation rule](#) in Engage, use the **Mark as Spam**, **Mark as Read**, and/or **Hide on Network** options within the **Then** dropdown to find and manage spam based on keyword or label triggers you choose.

The screenshot shows the 'Create automation rule' dialog box. At the top, it says 'Create automation rule' with a close button (X). Below this, there's a 'MATCH ALL' dropdown. The 'If' section is set to 'Text' with a 'CONTAINS ANY OF' dropdown. To the right of this is a text input field labeled 'Add keywords' with a close button (X). Below the input field, there's a hint: 'Type a word or phrase and press Enter. You can also paste a comma-separated list of words or phrases.' Below the 'If' section is a plus sign (+) button. The 'Then' section has a 'SELECT ACTION' dropdown menu that is open, showing several options: 'Add labels', 'Assign to', 'Mark as read', 'Mark as spam', 'Hide on network', and 'Salesforce Case Creation'. The 'Mark as spam' option is currently selected. Below the 'Then' section is an 'Apply to' dropdown. At the bottom, there's a 'Rule name' text input field. On the bottom left is a 'CANCEL' button, and on the bottom right is a 'CREATE RULE' button.

By defining multiple actions within a rule, you can, for example, hide a message on the network and mark it as read simultaneously. This allows you to automatically filter out messages you've designated as spam, saving you time by eliminating the need to manually review them.

CREATE RULE

**Note:**

The Mark as Spam option is an internal Engage action and will not report the message as spam to the native network.

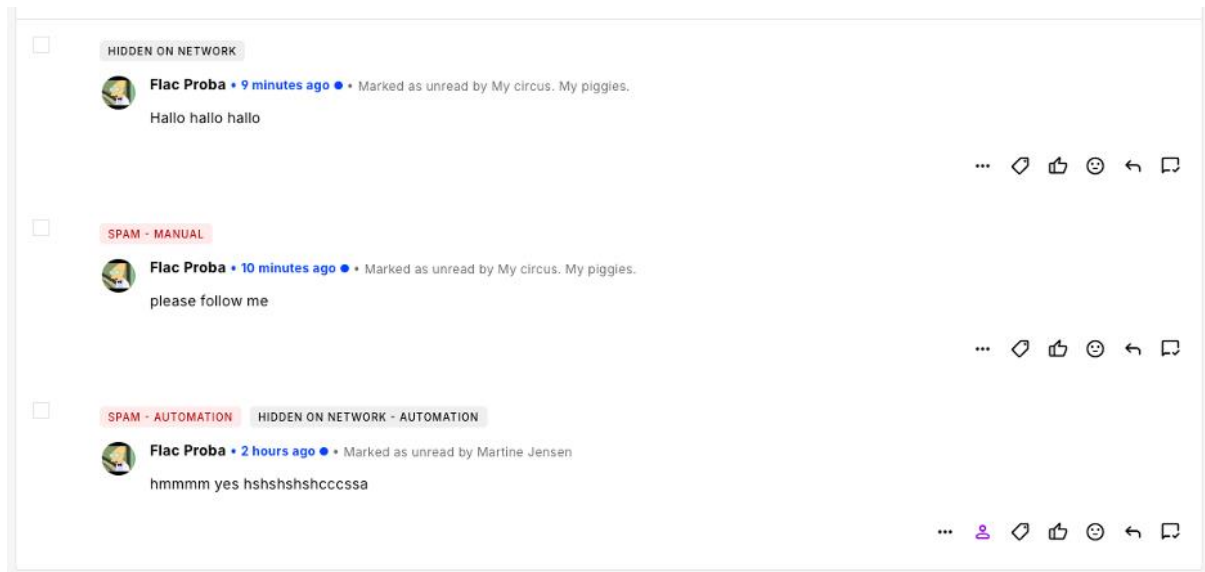

**Note:**

The Hide on Network option only works for the message types where the hide feature is supported via the network's API. At the moment, this is supported for comments on your own post on Facebook, Instagram, TikTok, X (Twitter) and YouTube. Comments on Facebook fan posts are also supported.

**Note:**

The Mark as Read option will count as a review action in Team Performance Report, but it will not be attributed to any user or team.

After you apply spam management automations or handle spam messages manually, you will see the message tagged with the action and **Manual** or **Automation**, letting you know how the message was handled.

## Using filters to manage spam

Use the Feed and Detail View filters in Engage to filter out spam and use the filters to find messages that were automatically categorized and handled as spam. This helps you review messages that were automatically marked as spam to make sure no valid messages were marked as spam incorrectly.

In any Engage feed, use the **Marked as spam** and/or **Hidden on network** filters to find messages that were marked as spam manually, by automation, or not marked as spam. You can find messages that are hidden, hidden by automation, or not hidden at all. The Feed filter will find the conversations in which one or more messages matches the filter(s).

In the Detail View when viewing a message, you can use an additional layer of filtering to filter in or out comments that are either spam or not spam, and hidden or not hidden.

Filter on keywords...

Marked as read by: ME ANYBODY NOBODY AUTOMATION

Assigned to: ME MY TEAM OTHERS NOBODY

Mentions me in notes: ☐

Message language: SELECT LANGUAGE

Priority: ☐

Sentiment: POSITIVE NEUTRAL NEGATIVE

With labels: Add labels...

Marked as spam: MANUALLY AUTOMATION NOT SPAM

Hidden on network: SELECT HIDDEN STATUS

CLEAR ALL

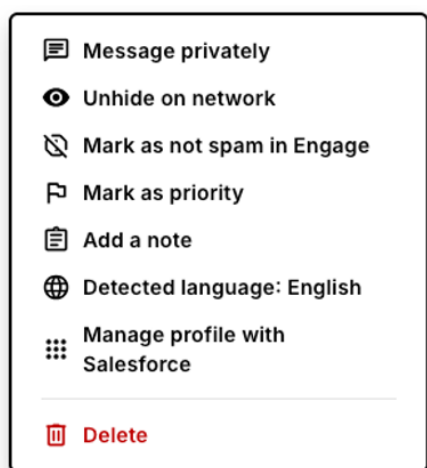

**Note:**

Filtering in Detail View will show the comments that match the Detail View filter. If the comment is a nested comment, you will also see its parent comment. If the comment is a parent comment and no nested comment matches the filters, these won't show.

**Note:**

At the moment the Detail view filters will not persist, so when you move to another conversation, the filters will reset.

You can manually Mark as Spam or Mark as Not Spam in case a message was wrongfully classified as spam by an automation rule. Additionally, you can manually unhide and/or mark messages as unread.

**Note:**

Mark as Unread will not undo any Mark as Read's counted in the Team Performance report.

---

### **Additional options for spam messages**

While viewing your spam messages, you can hover over the message to add labels, assign it to a teammate, hide it, or delete it (comments and page posts).

For X (Twitter) and Facebook spam messages, you can also choose to permanently block the user by clicking on the user's profile name followed by the block icon on the right-hand side of the page. For more information, visit our article on [Blocking Users in Engage](#).
