‘Distribute your stories to those that need them. Now.’

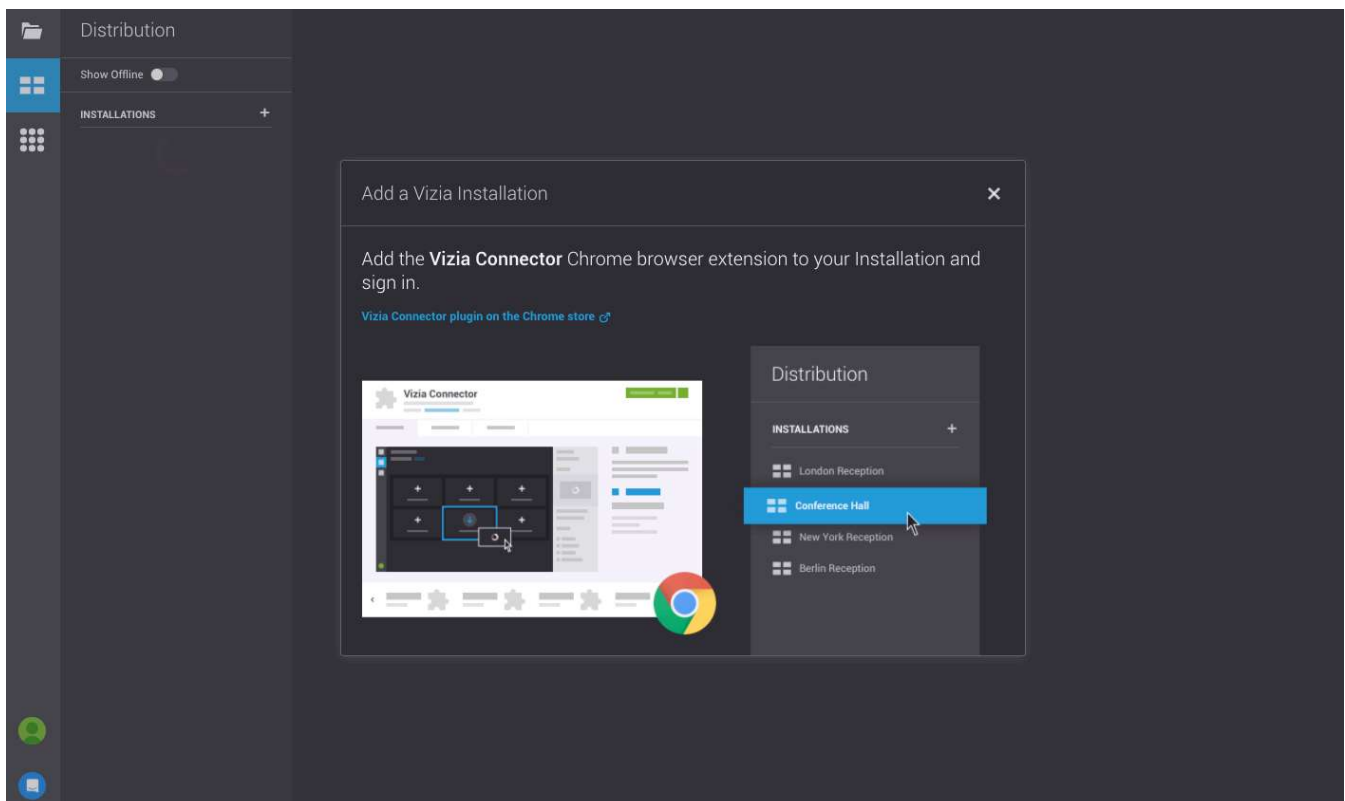

Follow the below article or download **this pdf** for the setup guide.

Vizia's state of the art distribution hub allows you to manage and distribute your content and insights at scale. This will allow you to share insights across the organization seamlessly. Any screen, anywhere can be turned into an impact and engaging insights display.

The Distribution Hub is where you manage the distribution of Vizia content to your network of connected screens. You have consolidated, central control, making publishing very quick and easy, creating confidence for you and impact for the people you reach.

In order to get your distribution hub up and running you will first need to connect your installations to your account. In order to do this you will need to run chrome on the desired screen(s) and install the Vizia Connector Chrome extension (more details below).

Once installed your installation will appear in your list in the Vizia platform. Find detailed how-to instructions below.

The Vizia Connector: an easy to install Chrome extension that allows a user to connect their screen to distribution so that it can be controlled remotely.

The Distribution Hub: a central UI for users to efficiently distribute content and manage remote instances of Vizia at scale. It is designed so that a user can

- Easily see and manage live Vizia Installation dispersed across different geographical locations from a centralised interface
- Push Content to screens on their Vizia Installation.
- Distribute content directly from the deck editors
- See who created and last edited content before you put it live.

How to Get up and Running:

- Navigate to the Chrome store [here](#).
- Click 'ADD TO CHROME' - this will install the extension.
- Click on The Hub icon that will appear to the right of the address bar in Chrome following a successful installation of the extension.
- Login to the extension using your Vizia credentials (the same that you use for vizia-admin).
- In the pop up, give your Wall a name. This is scoped to the machine that you're using, not your chrome window! Examples we have in Brandwatch include "Brighton Lobby", "Second Floor" and so on.
- Navigate to admin.vizia.brandwatch.com
- Log in using your Vizia credentials
- Choose your installation from the available list
- Expand your Installation to see a representation of the physical layout.
- Click "replace content on screens" to view the content browser and select your desired deck
- Drag and drop the deck you would like to use onto the Screen you would like it to show on.
- If you would like to show some non-vizia content on one of your Screens, click 'Web Pages'
- Click on the add icon to add your external content.

Once it's been added, drag and drop it from the list onto the Screen you would like it to show on.
